

Passport Health RTP Launches OnDemandCARE

Passport Health RTP, North Carolina, has selected *OnDemandCARE* by Global eSolutions Group (GEG), as their new Electronic Medical Record (EMR) solution.

Passport Health RTP (Research Triangle Park) is part of a national vaccine company specializing in travel vaccines, travel counseling, medications and supplies for travelers going abroad (business, leisure, mission work, foreign adoption, student abroad programs etc.).

"*OnDemandCARE* will eliminate the need to have duplicate medical records in our satellite offices," explained Melissa Wagers, President of Passport Health RTP, North Carolina. "Instead, the computerized system will allow for access by clinicians and staff without transferring paper records from office to office prior to a client's appointment."

"Another benefit with this EMR is that we do not have to hire additional IT staff, we only have an affordable, fixed monthly service fee with the ASP model," added Wagers.

"We currently transport or fax client records to offices prior to a client's appointment. We were definitely looking to streamline our process and be more efficient.

OnDemandCARE will eliminate quite a bit of paperwork, which will save a significant amount of time and overhead and will improve our customer service," Wagers added.

Passport Health will implement the software to enhance office efficiency and security, as well as have a centralized method for accessing and storing patient data and office documents between its several locations.

Eventually, Passport Health will also be implementing the billing and document management solutions to the EMR making their company totally paperless.

In addition to travel medicine, Passport Health also pro-

vides flu shots, meningitis shots, shingles vaccines, Gardasil for cervical cancer, and pre-and post-exposure rabies vaccines.

"*OnDemandCARE* is a perfect fit for Passport Health," said Brian Lord, CEO of GEG. "Its not only designed to work with large medical facilities, but also smaller organizations like Passport Health looking for a cost-effective, diverse solution."

OnDemandCARE is an integrated software solution – a suite of services designed to help an organization grow by addressing all of its medical electronic data storage, tracking, and retrieval needs. *OnDemandCARE* is an unmatched alternative offering a safe, easy, cost-effective solution based on open source healthcare integrated technologies.

OnDemandCARE is based on enhancements and integrated extensions to the lauded and very successful VistA technology that has allowed the VA's 155 hospitals, 881 clinics, 135 nursing homes and 45 rehabilitation centers to be linked by a universal medical records network. It allows any authorized person to look at 5.3 million patients' records - - everything from a nurse's note

written during a hospital stay, to the result of a blood test drawn at a clinic visit, to the moving-picture film of a coronary angiogram done in a cardiology lab. Other open source technologies that are integrated into *OnDemandCARE* service model include: Document Management & Imaging, Enterprise Resource Planning for financial reporting and Supply Chain Management, Business Intelligence and the leading relational database for geographical redundancy.

The ASP model is a centralized hosted application within the Louisiana Ties Center. It will offer a total redundant backup system for the clinic. "Because it is a web-based application, it is accessible from anywhere, anytime — but it allows for a localized backup as well," added Lord.
